

How Oasis Hardscapes Grew From 3 to 11 Large Projects per Month With an Automated Social Media Engine

Client Snapshot

Client: Oasis Hardscapes & Design

Industry: Landscaping, custom patios, and outdoor living spaces

Location: Seattle

Team size: Owner, 1 designer/salesperson, and 2 manual labor crews, totaling roughly 8–10 workers

Service provided by NAY Consults: Daily automated social media engine for Facebook and Instagram

Timeline: 2 months

The Results

In two months, Oasis Hardscapes & Design went from relying on expensive shared-lead platforms to generating inbound organic demand from local homeowners.

Key outcomes:

- Monthly large projects increased from **3 to 11**
- Monthly gross increased from around **\$45,000 to over \$165,000**
- Shared-lead subscriptions were canceled
- Leads shifted to inbound organic DMs from local homeowners
- Social media became a 24/7 local portfolio showcasing completed work

“The change was absolute night and day. Once that automated schedule kicked in and people actually started seeing our work consistently, we completely canceled our expensive shared-lead subscriptions.”

The Challenge: Stuck in the Shared-Lead Trap

Before working with NAY Consults, Oasis Hardscapes & Design had almost no organic presence in Seattle.

For a visual business like hardscaping, this was a major problem. Their work depended on homeowners seeing the quality of their transformations: muddy backyards becoming custom patios, outdoor spaces being redesigned, and finished projects creating a premium first impression.

But instead of being discovered organically, Oasis had to rely on platforms like Angi and HomeAdvisor.

That created a frustrating cycle.

They were paying for access to shared leads, but those leads were also being sold to several other local contractors. Every opportunity turned into a bidding war. Instead of being chosen for their quality, Oasis was constantly pushed into price competition.

As the owner explained:

“The worst part was the shared-lead rat race. We were paying a premium just for the chance to bid against five other local contractors, which forced us to race to the bottom on price.”

Because of that friction, Oasis was stuck at roughly **3 large projects per month**.

They did good work, but not enough local homeowners were seeing it. Their best sales asset, the transformation of their completed projects, was not being used consistently.

Why Oasis Needed a New Growth Channel

Oasis did not just need “more posts.”

They needed a system that could turn their completed jobs into proof.

Their team was busy managing job sites, crews, customer expectations, and sales conversations. Even though they knew they should be posting more, social media kept getting pushed to the bottom of the list.

The owner and designer were too busy running the business to spend time every day choosing photos, writing captions, finding hashtags, and remembering to post.

As the owner put it:

“Before, my designer and I were always telling ourselves we needed to post more, but after managing 10 guys across two job sites all day, the last thing we wanted to do was figure out Instagram hashtags.”

The issue was not a lack of content. Oasis already had strong visual proof from real projects.

The issue was that the proof was not being distributed consistently.

The Strategy: Turn Social Media Into a 24/7 Local Portfolio

NAY Consults built a daily automated social media engine for Oasis.

The strategy was simple: make sure local homeowners saw Oasis’s work consistently before they ever reached out.

Instead of relying on shared-lead platforms, Oasis would build authority in its own market by showing real transformations across Facebook and Instagram every day.

NAY Consults scheduled 30 days of content at a time, using:

- High-quality before-and-after photos
- Time-lapse job site videos
- Local community tags
- Facebook and Instagram distribution
- Consistent posting designed to build trust over time

The goal was not just visibility. The goal was to reposition Oasis from “one of many contractors bidding for a job” to “the contractor homeowners already wanted before they sent a message.”

This changed the role of social media from a casual marketing channel into an always-on sales asset.

What NAY Consults Implemented

NAY Consults took over the content system and removed the daily marketing burden from the Oasis team.

The implementation included:

1. A 30-day content schedule

Instead of posting randomly, Oasis had a full month of content planned and scheduled in advance. This gave the business consistency without requiring the owner to manage social media every day.

2. Visual proof content

NAY Consults focused on the kind of content that naturally sells hardscaping: before-and-after transformations, job site progress, time-lapse videos, and completed outdoor spaces.

3. Localized distribution

Posts were designed for local discovery by using community tags and location-relevant signals across Facebook and Instagram.

4. Automated daily posting

The engine ran in the background, keeping Oasis visible while the team focused on sales, operations, and project fulfillment.

The Results: More Projects, More Revenue, and Better Leads

Within two months, Oasis saw a major shift in how leads came into the business.

Before the automated social media engine, Oasis was landing around **3 large projects per month** and generating roughly **\$45,000 in monthly gross**.

After the system was implemented, they scaled to **11 large projects per month** and over **\$165,000 in monthly gross**.

Metric	Before	After
Monthly large projects	3	11
Monthly gross	\$45,000	\$165,000+
Lead source	Shared-lead platforms	Organic inbound DMs
Sales positioning	Competing on price	Chosen for quality

The biggest change was not just volume. It was lead quality.

Homeowners were no longer discovering Oasis as one contractor among many on a shared-lead marketplace. They were seeing the company's work repeatedly through Facebook and Instagram. By the time they reached out, they already understood the quality of the work.

"By the time a homeowner messaged us, they were already sold on our quality. They weren't shopping for the cheapest price anymore; they specifically wanted us to build their yard."

That shift helped Oasis escape the price-comparison trap.

Instead of chasing leads, the company started receiving inbound messages from homeowners who already had trust in the brand.

The Operational Impact: Marketing No Longer Sat on the Owner's To-Do List

The automated system also changed the owner's daily routine.

Before, marketing depended on the owner or designer remembering to post after long days managing crews and job sites. That made consistency difficult.

After NAY Consults implemented the 30-day scheduling system, the marketing engine ran in the background.

"Knowing that 30 days of content was already scheduled and running in the background meant we never had to think about it. It completely removed marketing from our daily to-do list so we could focus entirely on running the new inbound sales and fulfilling the actual work."

This was important because the growth system did not create more work for the team. It removed work.

Oasis gained a consistent local presence without needing to hire a social media manager, manually post every day, or keep paying for shared leads.

The Transformation

Before NAY Consults, Oasis was dependent on third-party lead platforms, competing against other local contractors, and struggling to build organic visibility in its own city.

After implementing the automated social media engine, Oasis had a consistent local presence, a visual proof engine, and a direct inbound channel from homeowners who already trusted their work.

The result was a stronger brand, better leads, and a major increase in monthly project volume.

“You cannot build a premium local brand if you are constantly begging for leads on third-party apps and competing on price. Having an agency automate your daily content proves your authority to your city every single day.”

Conclusion

For local contractors, especially those in visual industries, completed work is often the strongest sales asset.

But if that proof is not being shown consistently, it does not generate demand.

NAY Consults helped Oasis Hardscapes & Design turn its existing project work into a daily automated content engine. In two months, that system helped the company move from shared-lead dependency to organic inbound demand, growing from **3 to 11 large projects per month** and increasing monthly gross from **\$45,000 to over \$165,000**.

For Oasis, social media stopped being another task on the to-do list.

It became their best local sales asset.
